Backend & Full-Stack Developer — Data Engineering

Data Engineering graduate and backend-focused developer with professional experience building RESTful APIs with Java/Spring Boot and Node.js/NestJS, full-stack features with React and TypeScript, and CI/CD pipelines with GitHub Actions. Experience across relational database design and optimization (PostgreSQL, MySQL), data analysis and BI with Python and Power BI, and Docker-based deployments on self-managed infrastructure. Spanish native, English B2 (ITEP).

Professional Experience

Luis David — Personal Brand (Independent) | Apr 2025 – Present

- Personal brand focused on artificial intelligence, automation, and data engineering, built to convert an audience into students of my online school.
- Run the full stack myself: website as the central hub for lead generation and educational content, n8n automations for enrollments, prospect tracking and email campaigns, a PostgreSQL/Supabase database for user and resource data, and a Docker-based deployment on a VPS managed with Dokploy.

Backend Developer Trainee — TechnoReady In-Mexico | Monterrey, N.L. | Sep 2025 – Dec 2025

- Developed eight RESTful API endpoints using Java and Spring Boot, implementing CRUD operations, clean architecture, version control with Git, and documentation with Swagger.
- Implemented CI/CD using GitHub Actions, integrating Code Scanning, Dependabot, and secure secrets management, applying best practices for security and dependency management.
- Designed and connected a MySQL database, using transactions and rollbacks to ensure data integrity and safe operations in the event of errors.
- Optimized the integration with SerpAPI using debouncing to reduce unnecessary calls and API costs.

Software Engineer Intern — Kwan Tecnología | Mérida, Yuc. | Nov 2024 – Jun 2025

- Participated in the full-stack development of a web platform for sports sponsorship management.
- Implemented frontend components using React and TypeScript, and developed backend services with Node.js and NestJS.
- Designed and optimized queries on PostgreSQL databases; collaborated in testing processes and technical documentation under SCRUM.

Projects

Sensor “PAT foot 2.0” — Data Engineer, Hospital O’Horán | Jan 2024 – Apr 2024

- Analyzed multi-source sensor data from custom embedded hardware using Python and SQL, built predictive modeling workflows to calculate health risk trends, and delivered executive BI dashboards in Power BI and Excel for healthcare professionals.

Facial Recognition Attendance System — Universidad Politécnica de Yucatán | Jan 2023 – Apr 2023

- Built a facial recognition system in Python (OpenCV, Pillow, Deep Learning) with a MySQL database, integrated with the university’s student registration platform.

Education

Universidad Politécnica de Yucatán — Data Engineering | Jun 2021 – May 2025 · IE University, Madrid — Santander Innovation & AI Experience | Jul 2026 · International College of Manitoba — English Language Enhancement Program | Apr 2024 – May 2025

Technical Skills

Backend: Java, Spring Boot, Node.js, NestJS, Python · **Frontend:** React, Next.js, TypeScript, JavaScript · **Data:** PostgreSQL, MySQL, MongoDB, Pandas, NumPy, Power BI, Tableau · **Cloud & DevOps:** AWS, Docker, Terraform, CI/CD (GitHub Actions), Git · **Tools:** Postman, n8n, Jira, Figma

Certifications

BackEnd Developer Core, Universidad Tecmilenio (2026) · Santander Innovation & AI Experience (2026) · AWS Academy: Generative AI Foundations (2025), Cloud Security Foundations (2025), Machine Learning Foundations (2025), Data Engineering (2024), Cloud Data Pipeline Builder (2024), Cloud Foundations (2024) · Google Project Management (2024)
